Locked In The Corners

Programmed Stainless Full  
Wrapper  
Houses 18x18 to 36x72  
with No Changeover

Full Wrapper Safes  
10 to 12 GA.

The terminology varies but the basic principal is the same. Horizontal Brake Forming with a Leaf or Wing Style Forming Arm has been called a Leaf Bender, Wingformer/Bender, Tangent Former/Bender or End Forming Unit.

These Units can be Independent Manual Load Forming Units or they can be Automated, Programmed and Incorporated in-line to produce complete Panel or Housing Sections. When utilized inline with a Rollform application they can be used to endform the leading and Trailing Flanges and/or form the section into a Three sided or full wrapper (four sided) cabinet or housing.

On Your Next Application it is important to consider the company that manufactures a complete line of Coil and Blank Feed, Punch, Notch, Rollform and Tangent Wingform Equipment.

Electrical Enclosures & Wireways up to 10 GA

Roof Vent  
Product Lines

Personal & Fire Safes Full Four  
Sided Housings Welded inline
